

Lesson 04 Demo 02

Generating UI Design Using Uizard

Objective: To generate the UI design for a web application for GroceryGo, a grocery company, using Uizard to enhance user experience and streamline online shopping

Tools required: Uizard

Prerequisites: NA

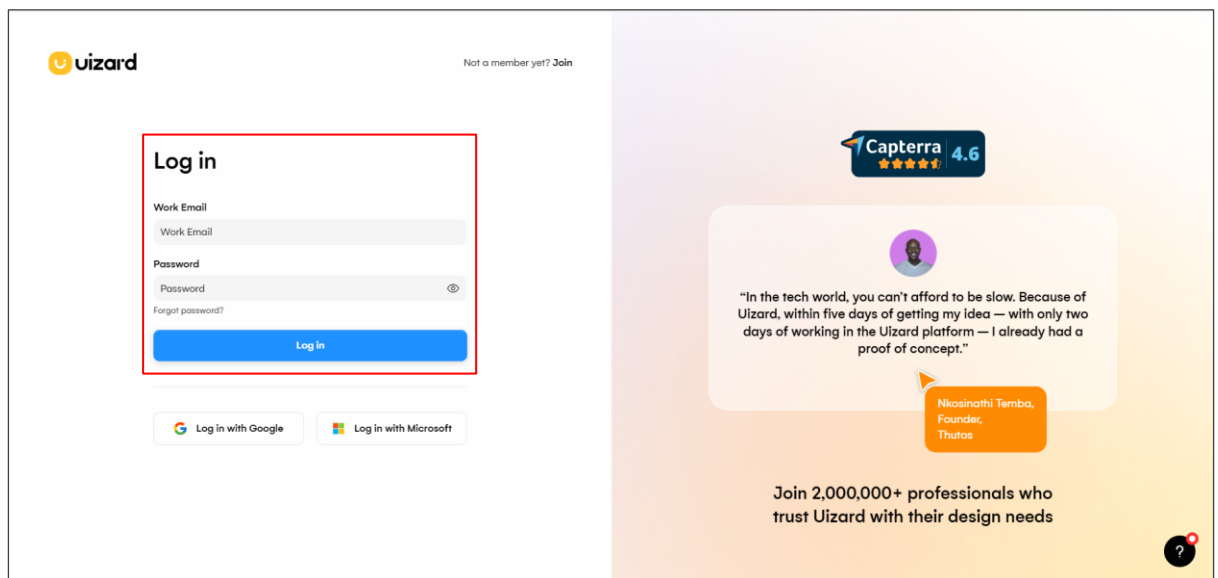

Steps to be followed:

1. Use Uizard AI to generate a user interface (UI) design for a web application

Note: Generative AI tool used in this exercise can produce varied outputs even when presented with similar prompts. Thus, you may get different outputs for the same prompt.

Step 1: Use Uizard AI to generate a user interface (UI) design for a web application

- 1.1 Navigate to the Uizard website, create an account, and log in

1.2 Select the terms and conditions and click on **Accept**.

Hi Prakasha,

Before we get started, can we send you emails and do you agree with Uizard's terms?

☒

I have read and accept the terms of service and privacy policy

☐

I want to receive news about Uizard services by email

Accept

1.3 Answer the given questions

Welcome Prakasha!

We'd love to know a bit more about you...

What kind of work do you do?

Team

What's your role?

Role

- 1.4 Select the appropriate interface based on usage. In this case, choose **Design a new mobile app or website project**

What do you want to achieve with Uizard?

Design a new mobile app or website project

Re-design an existing app or website

Ideate, brainstorm, and test design ideas

Design a mockup for fundraising or closing contracts

Other

Progress bar: 6 segments, 5th segment highlighted

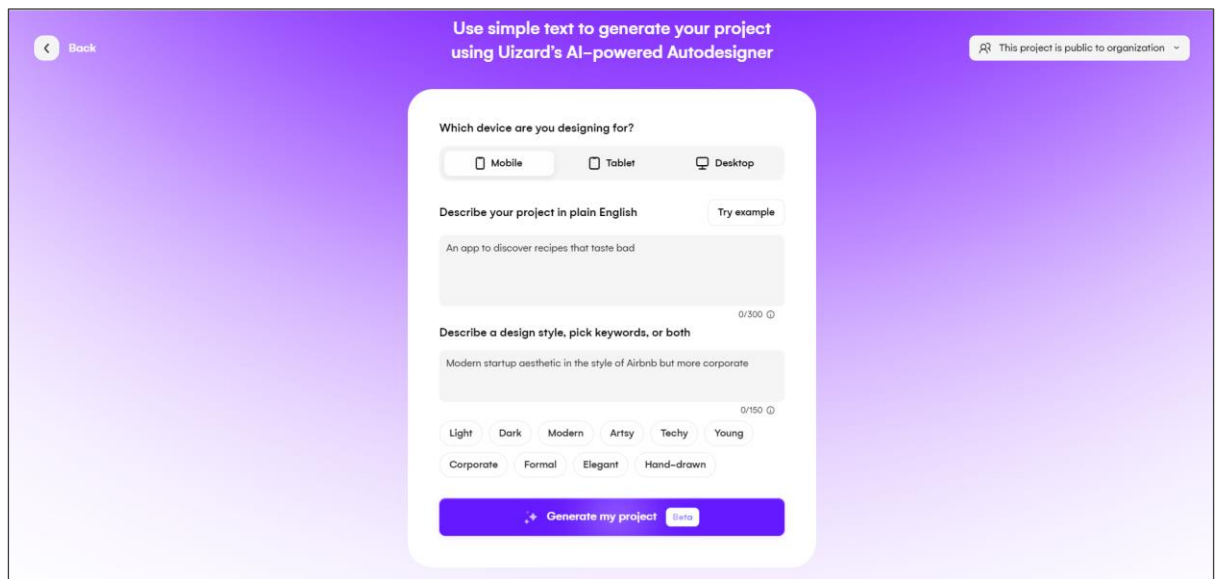

The following page appears once all the processes are completed:

1.5 Click on **Generate it with Autodesigner** to generate the web application

The page appears as follows:

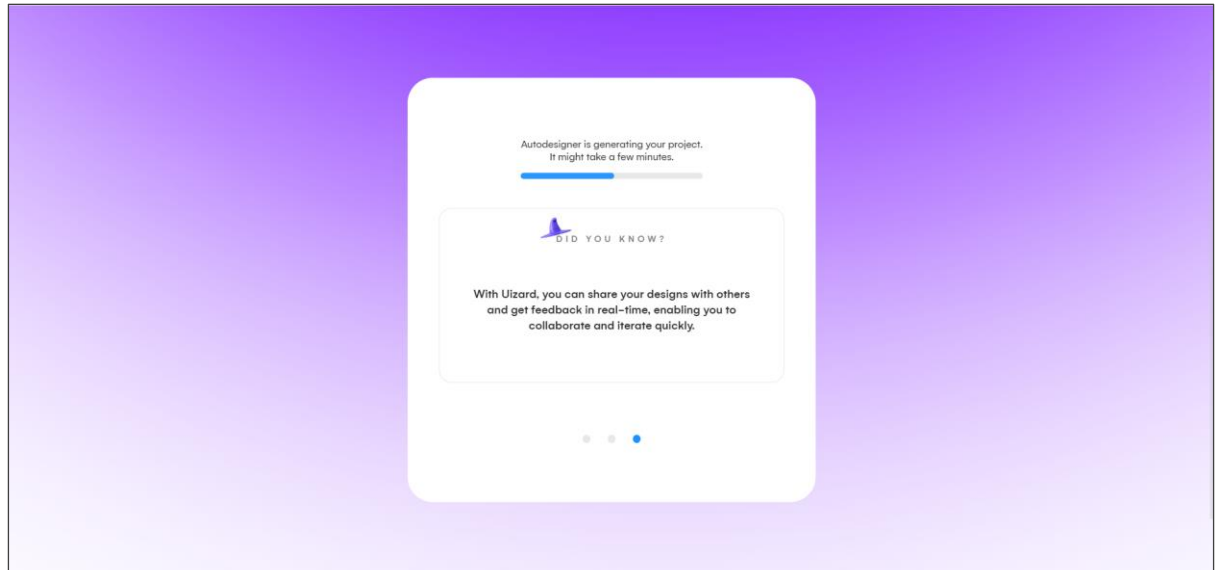

- 1.6 Select **Desktop** as the device and choose the specified options for designing the web application. In this case, select **Modern** and **Elegant**. Then, provide the following prompt and click on **Generate my project**:

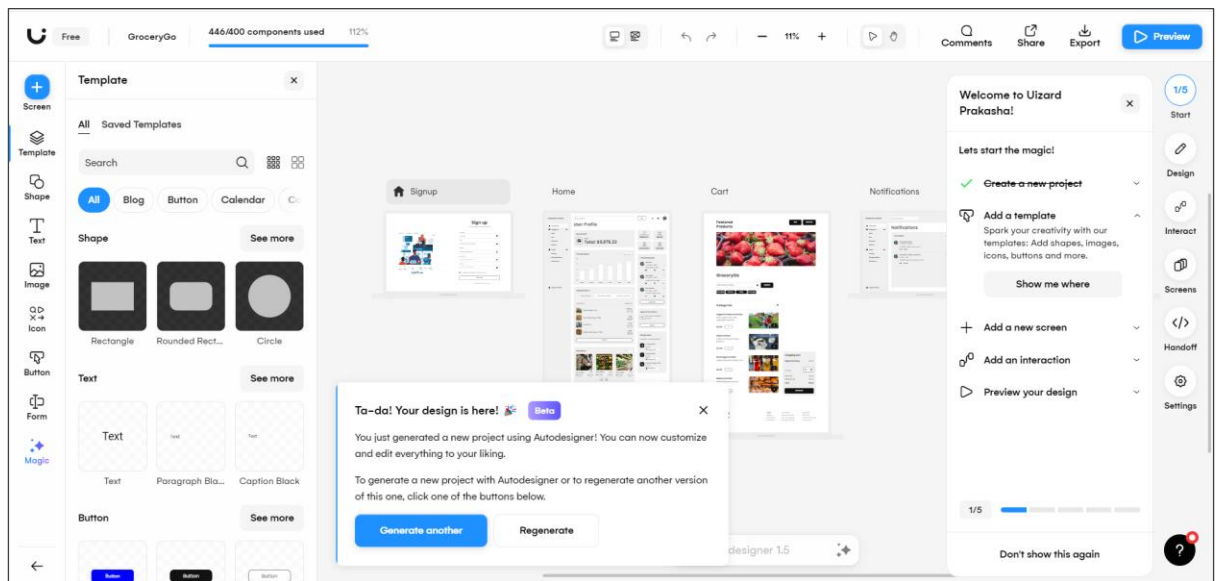

A grocery app named GroceryGo contains a home page, user profile, cart, and wishlist. All pages should be connected with each other.

The screenshot shows the Uizard AI-powered Autodesigner interface. At the top, it says "Use simple text to generate your project using Uizard's AI-powered Autodesigner". Below this, there's a section "Which device are you designing for?" with three options: Mobile, Tablet, and Desktop. The Desktop option is selected and highlighted with a red box. Below this, there's a section "Describe your project in plain English" with a text input field containing the prompt: "A grocery app named GroceryGo contains a home page, user profile, cart, and wishlist. All pages should be connected with each other." Below the text input field, there's a section "Describe a design style, pick keywords, or both" with a text input field containing the prompt: "Modern startup aesthetic in the style of Airbnb but more corporate". Below the text input field, there's a section "Light Dark Modern Artsy Techy Young Corporate Formal Elegant Hand-drawn". The Modern and Elegant options are selected and highlighted with red boxes. At the bottom, there's a button "Generate my project" with a "Beta" label next to it, also highlighted with a red box.

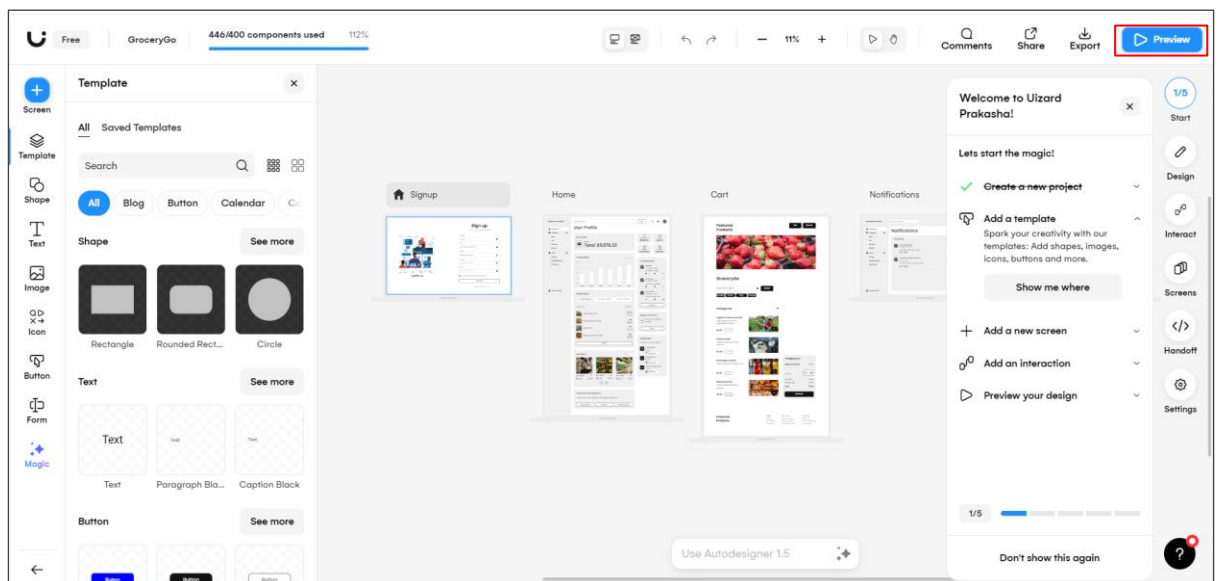

You will see the following interface:

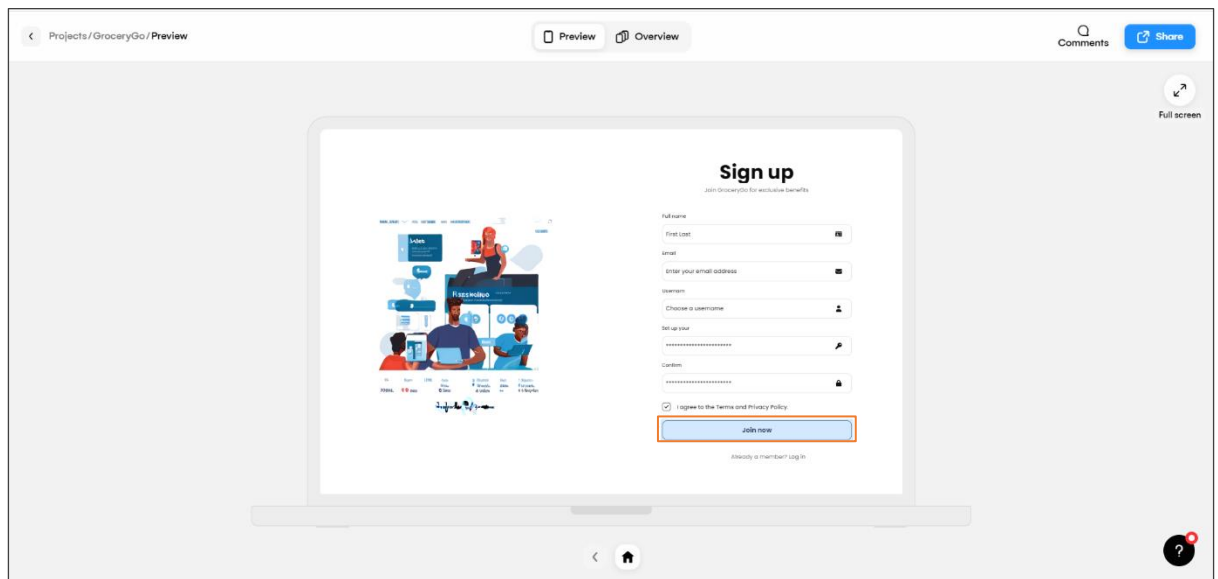

The web application is generated, and it appears as follows:

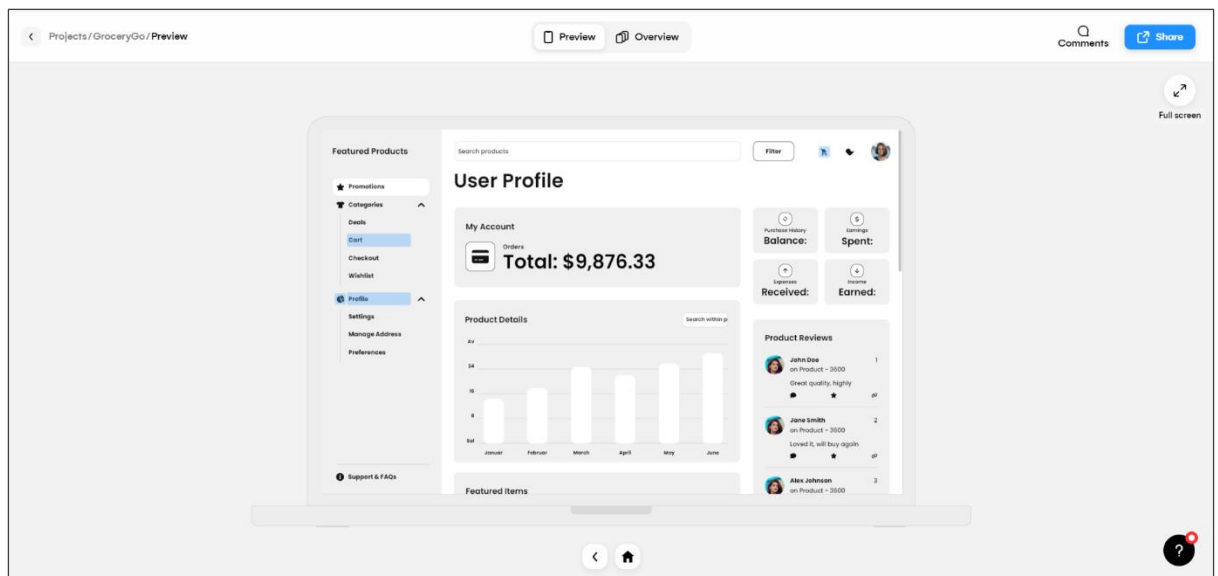

1.7 Click on the **Preview** button at the top right to view the generated UI application

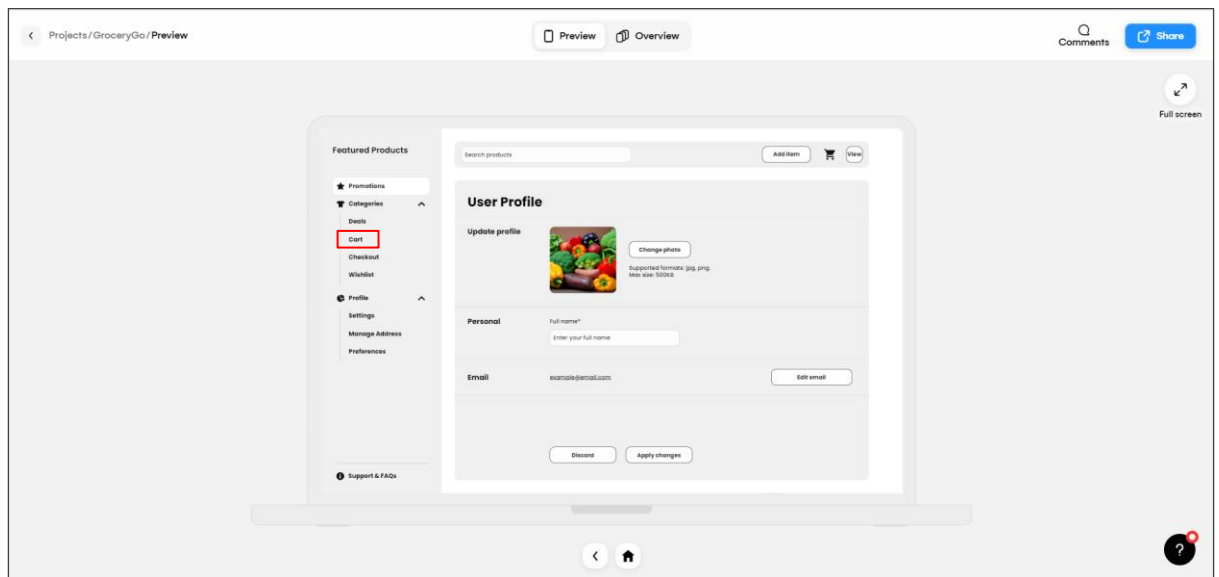

1.8 Click on **Join now**

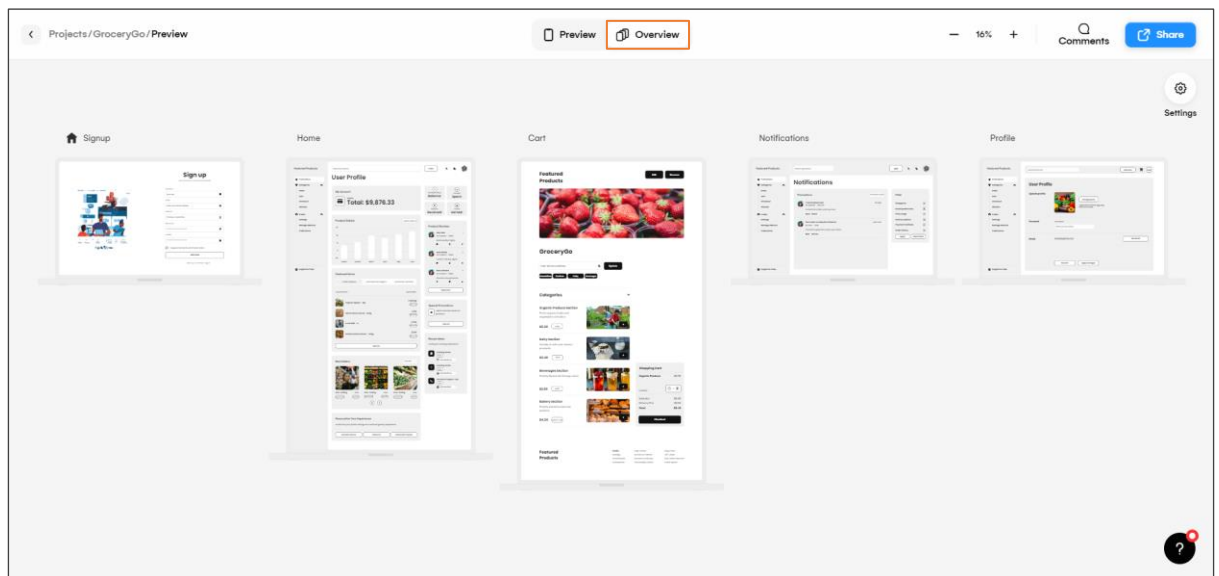

The web application page shows the **User Profile**. Click on the highlighted text to view the page:

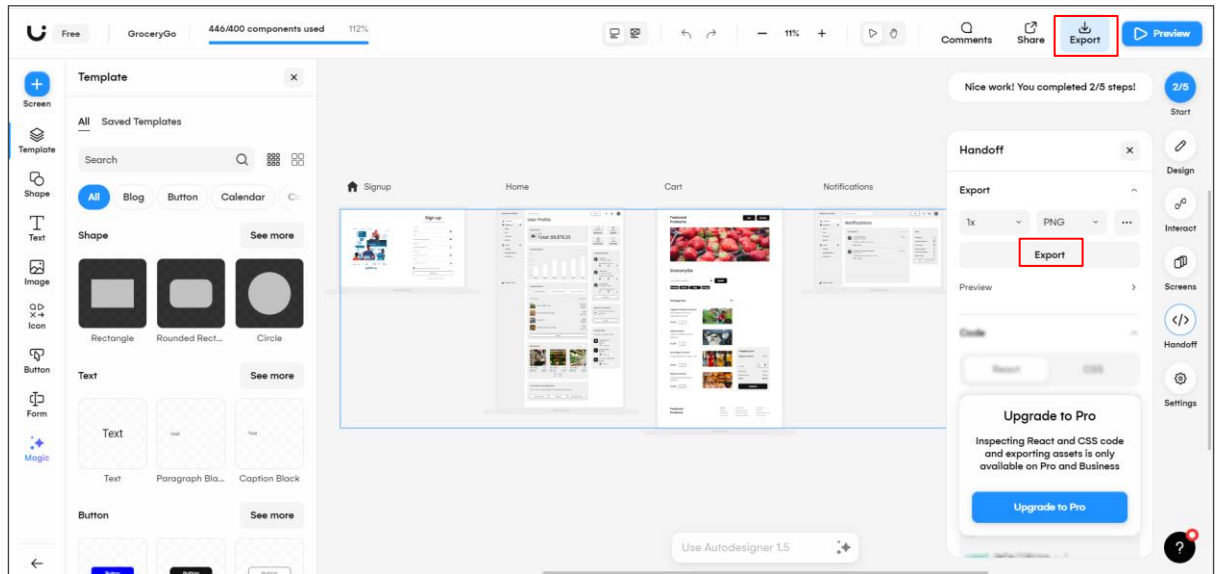

1.9 Click on **Cart**

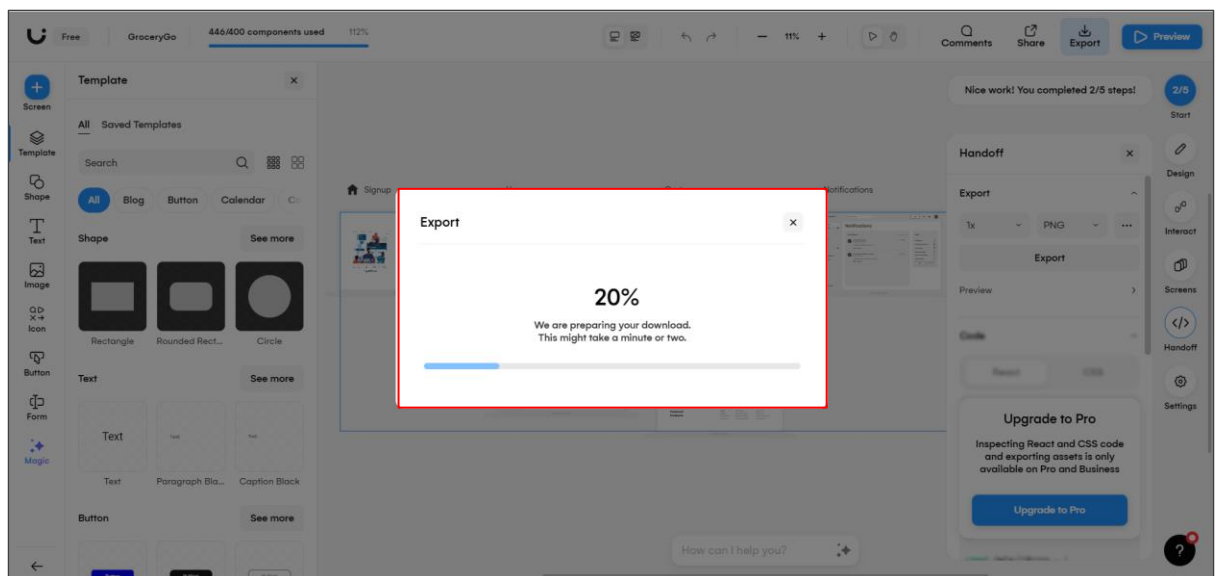

1.10 Click on **Overview** at the top of the page

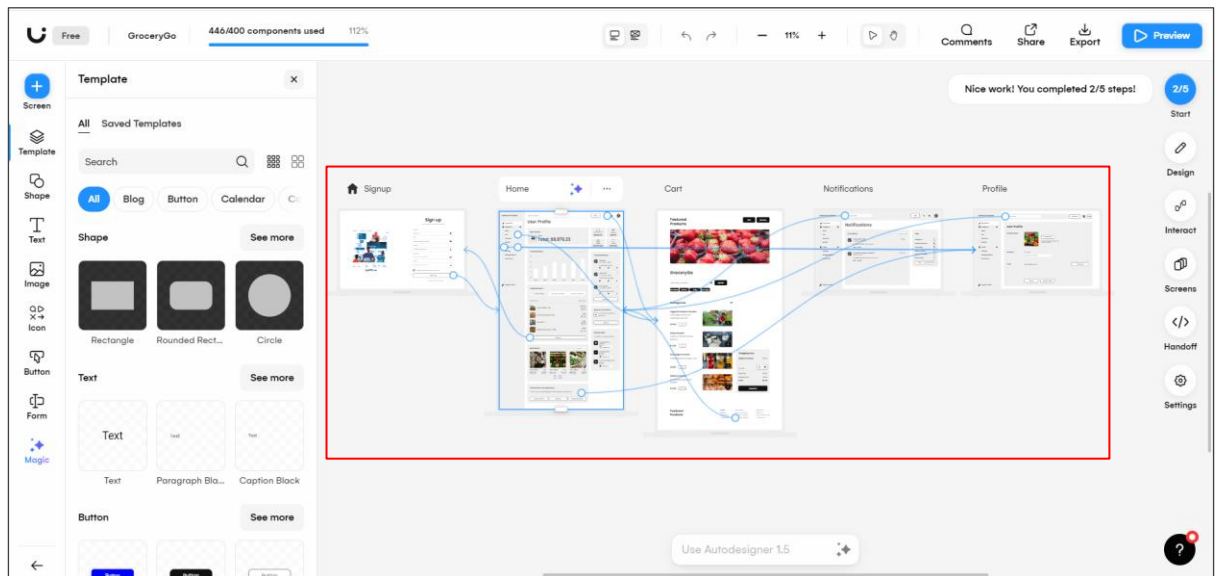

1.11 Navigate to the UI generated page, select the generated pages, click on **Export** at the top right, and then click on **Export** to export the project as a zip file

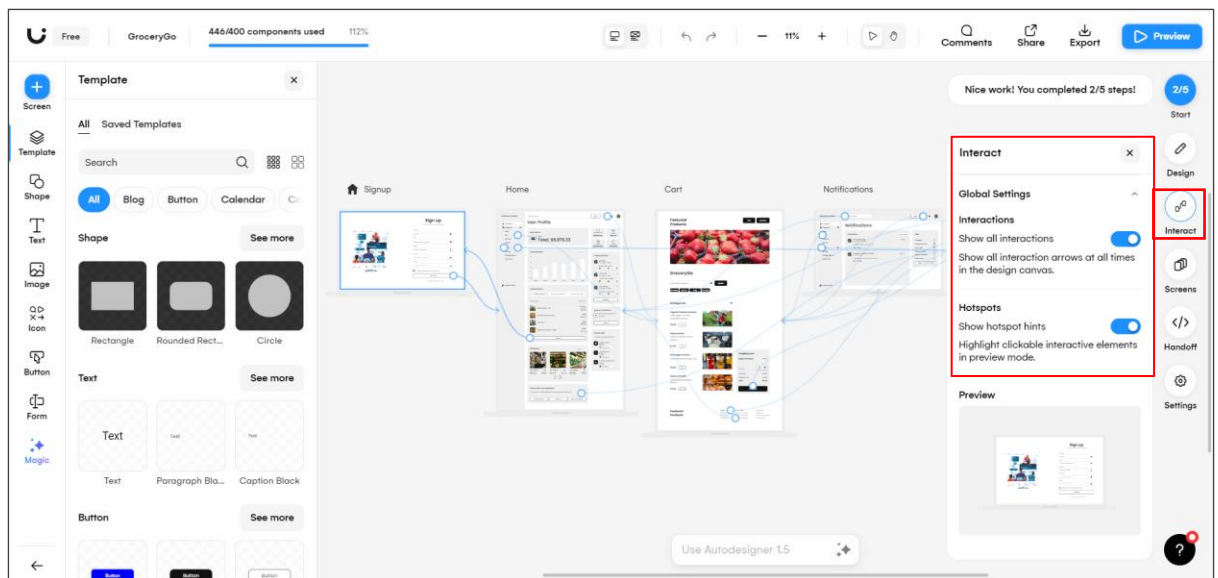

The progress of exporting the project is as follows:

1.12 View the interaction between the different web pages by clicking on the title of the generated web page

1.13 Select **Interact** to change the interaction type based on the requirements

By following these steps, you have effectively utilized Uizard to create a user interface (UI) for generating a grocery company web application.
